### Wiring diagram

### Functional principle

The self-monitoring safety light curtains with redundant switching outputs are available in lengths up to 320 mm and resolutions of 14 or 24 mm. The devices are available individually or in pairs and synchronize optically - a physical connection between transmitter and receiver is not required. The setting is made automatically. The dual scan of each receiver provides immunity against EMI, radio wave, ambient or strobe lights and welding sparks. All recipients have no restart interlock – an automatic reset is performed.

## Technical data

The robust and sealed housing is ideally suited for industrial use. Status and error code can be read out in case of need via the diagnostic display. For easy mounting, LEDs indicate the proper alignment of each segment.
