## 1-channel

### IM36-11EX-U/24VDC

The 1-channel potentiometer amplifier IM36-11EX-U/24VDC is designed to transmit signals from 3 or 5-wire potentiometers galvanically isolated from the Ex area to the non-Ex area and to convert them into normalized 0...10 V analog signals. The resistance value of the wiper contact, ranging from 0 Ω to the nominal resistance value (final value) of the potentiometer, is detected and linearly processed.

A potentiometer is defined by its nominal resistance value. Any potentiometer can be connected, provided the nominal resistance is 800 ... 20000 Ω. Common potentiometers featuring a nominal resistance of 1 kΩ or 10 kΩ can thus be used. The admissible line resistance is maximally 50 Ω with a potentiometer resistance of 800 Ω.

Galvanic isolation between input circuit, output circuit and power supply.

- Transmission of potentiometer signals from the Ex area
- Potentiometer, nominal resistance: 0.8...20 kΩ
- Output circuit: 0...10 V
- Complete galvanic isolation
- Input reverse-polarity protected
- ATEX, TR CU
